Component Hunt

Website Chosen: YouTube

Introduction In this activity, I analyzed the structure of the YouTube homepage and divided it into smaller components. Breaking a website into components helps developers understand how large websites are designed and developed using reusable UI elements.

Main Components of the Website

1. Navigation Bar (Navbar): The navigation bar is located at the top of the page. It helps users navigate through the website and search for videos.
   It includes:
   1. YouTube logo
   2. Search bar
   3. Voice search button
   4. Upload button
   5. Notifications icon
   6. User profile icon

2. Sidebar: The sidebar is located on the left side of the page. It allows users to quickly access different sections of the platform.
   Examples:
   1. Shorts
   2. Subscriptions
   3. Library
   4. History
   5. Watch Later

3. Category / Filter Bar: Below the navigation bar there is a category bar that allows users to filter videos by topic or category.
   Examples:
   1. All
   2. Music
   3. Gaming
   4. News
   5. Live
   6. Technology

4. Video Grid Section: This is the main section of the page where videos are displayed. Videos are arranged in a grid layout.
   Each video card contains:
   1. Video thumbnail
   2. Video title
   3. Channel name
   4. Number of views
   5. Upload time

5. Footer: The footer is located at the bottom of the webpage. It contains useful information and links.
   Examples:
   1. About
   2. Privacy Policy
   3. Terms of Service
   4. Help
   5.

Conclusion

By breaking the YouTube webpage into components like Navbar, Sidebar, Video Cards, and Footer, developers can design and build the website using smaller reusable parts. This component-based structure is commonly used in modern frontend frameworks such as React.
